DETAILED ACTION

Allowable Subject Matter

1. Claims 1-44 are allowed.
2. The following is an examiner's statement of reasons for allowance: Prior art of record teach precursor compositions for CVD formation of low k dielectric films comprising an aromatic compound, but fail to teach at least one unsaturated constituent that is ethylenically and/or acetylenically unsaturated. Most precursor compounds are not in gaseous form but solvent form. Prior art of record teach aromatic compounds, but in combination with one of an alkyl, alkoxy, or heterocyclic compound. Lee et al. teach forming precursor compounds to make materials with low dielectric constant with chemical vapor deposition with a polymer comprising an aromatic, but again, wholly fail to teach an unsaturated constituent that is ethylenically and/or acetylenically unsaturated.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References not applied are considered state of the art in the area of semiconductor manufacture.
